

Incident Report

Prepared by: IncidentFrameAI

Date: 19 July 2026

Incident Overview

An incident labeled as an "Accident" (confidence: 70%) occurred on **2026-07-22 at 12:37:14** in the **Science Block, Outside Chemistry Lab C-204**. The incident involved two individuals (Person_1 and Person_2), whose roles and exact identities remain unknown (confidence: 70%).

Observed Events

1. **Fall (Sequence 1):** A fall incident was observed via camera footage (confidence: 90%).
2. **Crowd Formation (Sequence 2):** A group of individuals gathered around the incident location, as captured by camera observation (confidence: 90%).
3. **Running (Sequence 3):** Individuals were observed running near the incident area, per camera footage (confidence: 90%).

These observations support the tentative classification of the incident as an accident.

Reported Events

1. **Push (Sequence 4):** A witness (Student A) reported physical contact between individuals occurred (confidence: 70%). This claim is corroborated by camera observation, though no direct evidence of the contact was recorded.
-

Conflicts

- **Mutual Exclusivity:** Student A's statement describing physical contact conflicts with Student C's denial of witnessing such contact (status: mutually exclusive). This discrepancy remains unresolved.
-

Inferred Events

- **Cause of Fall:** The exact cause of the fall remains unknown. No evidence was identified to confirm or rule out contributing factors (confidence: low).
 - **Participant Roles:** The roles of Person_1 and Person_2 in the incident are unspecified. While the fall and crowd formation were observed, no definitive association between the participants and these events was established (confidence: low).
-

Unknowns

- The cause of the fall is undetermined.
 - The exact roles of the participants (Person_1 and Person_2) could not be confirmed.
-

Conclusion

The incident is tentatively classified as an accident based on observed evidence, though uncertainties persist regarding the cause of the fall and the roles of the individuals involved.

Reported accounts of physical contact conflict, and further investigation may be required to resolve discrepancies. No blame is assigned beyond the frame and participant descriptions provided.
